

Introducing Value Read by SubTech

Over the last year SubTech has been implementing advanced reading equipment that eliminates the need for manual data entry from touch read systems. The goal is to make manual reading impervious to human error.

Value Read achieves our goal by automating the entire data collection process ensuring the right read is captured every time. We have incorporated hand held route software in the field for all touch read systems providing data output indistinguishable from RF Fixed networks and drive by read systems.

SubTech Value Read will not allow ID discrepancies between address and meter read. Furthermore, high consumption and zero usage meters are triggered in the field; while our technicians are on site.

This is not all. For a very competitive rate you will get the added benefit of:

- *A Routing system compatible with any billing system.*
- *Free route conversion.*
- *Meter type and count factor are verified.*
- *No missed reads.*
- *All problematic meters are reported at time of read.*
- *Neptune, Schlumberger, Sensus, Master Meter Dialog, Badger, Elster/ Amco ScanCoder, Hexagram/ Hersey Touchless, Fusion all supported.*
- *SubTech also reads Master Meter 3G, Itron(fixed network only), Ramar and Badger TRACE.*

Only from your trusted business ally and full-service submeter solution!
